📍 Thanh Xuan, Ha Noi

CAREER OBJECTIVE

As a student beginning my journey in software development, I am eager to gain hands-on experience through an internship as a Frontend Developer. I aim to learn and contribute by building intuitive, efficient, and user-friendly interfaces using ReactJS and NextJS. I have a basic foundation in UI/UX design, a mindset for writing clean code, team collaboration skills, and leveraging AI tools to accelerate and enhance design.

In the long term, my goal is to become a well-rounded Fullstack Developer - expanding my knowledge in backend development, software architecture, and system integration, while continuously improving my communication and language skills. I also remain open to learning and adopting new technologies to effectively contribute to software development projects.

EDUCATION

PTIT (Posts and Telecommunications Institute of Technology)

(September 2023 - June 2028)

Major: Cybersecurity

GPA: 3.09 / 4

SKILLS

Web design	Design UI/UX
Frontend Developer	User Interface Development
Backend Developer	Basic understanding of backend fundamentals (APIs, databases, and server-side logic).
AI Tools	Researching and utilizing AI tools to accelerate UI/UX design, boost productivity, and support development processes.
Teamwork skill	Effective communication and teamwork skills

PROJECT

Netflix_Clone

Web Design, Frontend Developer, Backend Developer

Team size: 1

ReactJS, NodeJS, Express, MongoDB

https://github.com/huytdn/NETFLIX_CLONE

I was responsible for developing the frontend and partially working on the backend. On the backend, I implemented JWT-based authentication and built a feature to save movies to a personalized "My Watchlist." Additionally, I integrated an AI-powered movie recommendation system to suggest films based on user preferences and viewing history. The frontend was developed using React and Tailwind CSS, delivering a responsive, modern, and interactive user experience inspired by Netflix.

Dashboard App

Web Design, Frontend Developer

Team size: 1

ReactJS

<https://github.com/huytdn/Dashboard-App>

I independently developed the entire frontend. I was responsible for designing and implementing responsive, interactive, and visually consistent user interfaces. The project utilized several modern libraries such as Material UI, Nivo, and Emotion to enhance the UI/UX experience and data visualization.

E-Commerce-Store

Web Design, Frontend Developer, Backend Developer

Team size: 1

NextJS

Portfolio

Web Design, Frontend Developer, Backend Developer

Team size: 1

NextJS
